The Los Angeles County Department of Public Health (Public Health) is asking for your assistance to help slow the spread of the novel (new) coronavirus in Los Angeles County. As we continue to see an increase in positive cases, it is important that we put precautions in place to slow the spread of the virus. Efforts to promote social distancing and to continue to care for individuals experiencing homelessness will protect our healthcare system and those who are most vulnerable. We understand that homeless shelters pose unique challenges, including restrictions on client or resident movement, variable space accommodations, and alternative staff work schedules. We strongly recommend that all organizations review and update their emergency plans and consider ways to continue essential services if on-site operations must be reduced temporarily. We would like to provide you with some general information about COVID-19 as well as specific actions you should take to help prevent the spread of respiratory infections, including COVID-19 at your shelter site.

We encourage you to visit the DPH Novel Coronavirus webpage for resources including Guidance for Business and Employers, Frequently Asked Questions, and infographics: http://publichealth.lacounty.gov/media/Coronavirus/.

**General Information**

**What is novel coronavirus?**
Coronaviruses are a large family of viruses. Many of them infect animals, but some coronaviruses from animals can evolve (change) and infect humans, then spread from person-to-person. This is what happened with the current novel coronavirus. Diseases from coronaviruses in people typically cause mild to moderate illness, like the common cold. Some, like the SARS or MERS viruses, cause serious infections like pneumonia.

**What are common symptoms of COVID-19?**
Information to date shows this new virus causes symptoms consistent with a respiratory illness, such as cough, fever, and, in some, shortness of breath or difficulty breathing.

**How are coronaviruses spread?**
Like other respiratory illnesses, such as influenza, human coronaviruses most commonly spread to others from an infected person who has symptoms through:
- Droplets produced when an infected person coughs or sneezes.
- Close personal contact, such as caring for an infected person.
- Touching an object or surface with the virus on it, then touching your mouth, nose, or eyes before washing your hands.

COVID-19 is new and we continue learning more each day about how it spreads and how long it takes for people to become sick. As information changes, we will keep you informed.

Do not assume that someone is at risk for novel coronavirus infection based on their race/ethnicity or country of origin.
What preventive measures should be taken at an organizational level to reduce the spread of respiratory viruses, like the virus that causes COVID-19?

- Encourage and support your staff and volunteers to stay home when they are sick. Remind them to stay home and not return to work until 7 days after symptoms began or 3 days (72 hours) after symptoms have improved and fever has resolved without the use of fever-reducing medications.
- Provide adequate supplies for good hygiene, including easy access to clean and functional handwashing stations, soap, paper towels, and alcohol-based hand sanitizer (especially near food areas and restrooms)
- Minimize, where possible, close contact and the sharing of objects such as cups, food, and drink.
- Routinely clean and disinfect all frequently touched surfaces and objects, such as doorknobs, banisters, countertops, faucet handles, and phones. Use the usual cleaning agents and follow the label directions.
- Provide guests of the facility and employees with accurate information about novel coronavirus and steps they can take to protect themselves and their families.
- Post information in common areas that serve as reminders of the need for all guests, employees, and volunteers to engage in personal protection actions (materials for downloading are available at publichealth.lacounty.gov).

Everyday personal prevention actions include:

- Wash hands often with soap and water for at least 20 seconds or use alcohol-based hand sanitizer that contains at least 60% alcohol especially after going to the bathroom; before eating; and after blowing your nose, coughing, or sneezing.
- Cover coughs and sneezes with a tissue, and then dispose of the tissue and clean hands immediately. If you do not have a tissue, use your elbow (not your hands).
  - Environmental cleaning should be done with EPA-approved healthcare disinfectant consistent with recommended wet contact time. Reference: California Department of Public Health AFL for Environmental Infection Control for the Coronavirus Disease 2019 (COVID-19) (02/19/20)

What practices should we adopt or change to slow the transmission of respiratory illnesses?

- Assess all guests daily and upon entry for symptoms of fever, cough and shortness of breath. Quickly move guests who are ill into an area that is isolated from the rest of the facility.
  - Designate a sick room (ideally in an area with an accessible bathroom) where guests with cold and flu symptoms can be housed in a separate building, room, or designated area. Beds in this area should be placed at least 6 feet apart or head-to-toe with beds 3 feet apart. Mobile screens can be used to encourage compliance with separation areas.
- Symptomatic guests should eat meals separate from asymptomatic guests.
  - If symptomatic guests need to move through areas with asymptomatic guests, they should be encouraged to perform hand hygiene, wear a surgical mask, and minimize the time in these areas.
• Monitor staff for fever or respiratory symptoms before they start work
  o Staff with fever and respiratory symptoms should be sent home until 7 days after the first onset of symptoms (cough, fever, headache, etc.), or 72 hours after symptoms improve and being fever-free (under 100.4° F) without the use of fever reducing medication, whichever is longer.
  o Staff with mild respiratory symptoms (runny nose, cough), should not report to work.
• Staff should wear personal protective equipment (PPE) such as masks, gloves or gowns only when appropriate:
  o Staff interacting with symptomatic individuals should provide a facemask to the guest and put on a facemask and eye protection on themselves during close contact with guests. Close contact is defined as a distance of less than 6 feet from the symptomatic individual for a period greater than 10 minutes for non-healthcare workers, or greater than 2 minutes if providing healthcare.
  o If staff is providing healthcare to the guest, they should put on a facemask, gloves, eye protection and gowns.
  o Make facemasks, eye protection, gowns, and gloves, available in clinical care areas for staff performing clinical duties.
  o Ensure employees clean their hands, including before and after contact with guests, after contact with contaminated surfaces or equipment, and after removing items such as gloves, gowns and masks.
  o Make sure tissues are available and any sink is well-stocked with soap and paper towels for hand washing.
• Hand hygiene stations (sinks with antibacterial soap and alcohol gel products) should be readily available throughout the facility, esp. at the entrances of the facility. Make sure tissues are available and any sink is well-stocked with soap and paper towels for hand washing.
  o Ensure employees clean their hands according to CDC guidelines (https://www.cdc.gov/handhygiene/providers/index.html), including before and after contact with guests, after contact with contaminated surfaces or equipment, and after removing items such as masks, gloves and gowns.
  o Educate and remind guests to perform hand hygiene throughout the day, particularly after using the restroom and prior to eating their meals.
• Position a trash can near the exit inside any guest dorms to make it easy for employees to discard items such as gloves, masks and gowns.
• Increased frequency of environmental cleaning should be done with EPA-approved healthcare disinfectant consistent with recommended wet contact time.
• Ensure there are no shared utensils, cups or linens and guests are requested to wash their hands prior to eating meals.
What should our facility be prepared to do if there is increased community transmission of COVID-19?

Increased community transmission of COVID-19 indicates growing risk to the general public and that additional precautions may need to be taken to contain any local community transmission. Shelters should have a plan and be prepared to take these additional actions, if recommended by Public Health:

- Have a plan to communicate with your staff, volunteers and guests. Visit our website, publichealth.lacounty.gov for accurate and updated information that can be used for your communications. Identify and address potential language, cultural, and disability barriers associated with communicating COVID-19 information to workers and those you serve.
- Plan for worker absences. Do not require a healthcare provider’s note for employees or volunteers who are sick with acute respiratory illness to validate their illness or to return to work. Healthcare provider offices and medical facilities will be extremely busy and not able to provide such documentation in a timely way.
- Plan for ways to continue essential services if on-site operations are reduced temporarily.
- Post signs at facility entrance instructing visitors and guests to alert staff if they have fever, cough or shortness of breath. Do not discourage symptomatic guests from entering.
- Have a plan for quickly directing people who are ill to an area of the facility that is isolated from other parts of the facility.
- Describe what actions the facility is taking to protect staff and guests, answer questions and explain what they can do to protect themselves and their fellow guests.

What should we do if a PEH guest exhibits mild COVID-19 symptoms?

- Confine clients with mild respiratory symptoms consistent with COVID-19 infection to individual rooms, if possible, and have them avoid common areas.
- Follow CDC recommendations for how to prevent further spread in your facility. If individual rooms for sick clients are not available, consider using a large, well-ventilated room for people with mild respiratory symptoms.
- In areas where clients with respiratory illness are staying, keep beds at least 3 feet apart and use temporary barriers between beds, such as curtains, and request that all clients sleep head-to-toe.
- If possible, designate a separate bathroom for sick clients with COVID-19 symptoms.
- Consider reducing cleaning frequency in bedrooms and bathrooms dedicated to ill persons to as-needed cleaning (e.g., of soiled items and surfaces) to avoid unnecessary contact with the ill persons.
- Decisions about whether clients with mild illness due to suspected or confirmed COVID-19 should remain in the shelter or be directed to alternative housing sites should be made in coordination with local health authorities.
- If you identify any client with severe symptoms, notify your public health department and arrange for the client to receive immediate medical care.
- Ensure that all common areas within the facility follow good practices for environmental cleaning. Cleaning should be conducted in accordance with CDC recommendations.
- If you plan to transfer the guest to a higher level of care due to worsening respiratory status, notify EMS that the guest has an undiagnosed respiratory infection.
• If multiple guests in your facility become newly sick with fever and respiratory symptoms, notify Los Angeles County Department of Public Health at 213-240-7941 during daytime hours or (213) 974-1234 (After Hours Emergency Operator).

What should we do if PEH client and staff member tests positive for COVID-19?
• If COVID-19 infection has been confirmed guests of your facility, consider temporarily suspending new admissions, visitors, and transportation to other institutions for 14 days.
  o Restrict the movement of persons within the facility, from leaving the facility, and from being transferred to another facility for 14 days.
  o Limit transport of suspected COVID-19 patients to essential purposes only. Place facemasks on suspected COVID-19 patients during transport.
• The Department of Public Health will activate public health nurses (PHNs) to visit the site and assess the facility, determine additional measures for separation, screen close contacts and quarantine, if necessary. Environmental Health will provide guidance and technical assistance on sanitation and cleaning practices.
• Staff should be monitored for symptoms. Exposed staff should be sent home for self-quarantine for 14 days. Guests whose symptoms worsen should be referred to medical care.
