COVID-19 TOOLKIT
Warehousing, Manufacturing and Logistic Establishments

This toolkit provides guidance for warehousing, manufacturing and logistic establishments to support safety for employees and visitors.
This toolkit includes:

1. COVID-19 Prevention Practices
2. Physical Distancing Requirements
3. Infection Control
4. Protecting Employees
5. Resources to Communicate with your Staff and Customers
To prevent the spread of COVID-19 in your warehousing, manufacturing or logistic establishment, here’s what you need to know and do:
1. COVID-19 Prevention Practices

- Physical distancing of at least 6 feet
- Use of face coverings by employees and visitors
- Frequent handwashing and regular cleaning
- Employee training on COVID-19 protocols
2. Physical Distancing Requirements

• The number of employees on site is reduced in all spaces to allow for physical distancing of at least 6 feet.

• Entry to the facility is limited to employees whenever possible. Visitors who play a role in workflow must comply with symptom checks, physical distancing, and use of face coverings.

• Designate separate entrances and exits, monitor occupancy, and ensure employees queued for screening line up at 6-foot intervals. If there is only one employee entrance, gaps between shifts are instituted.

• Common areas, break rooms, restrooms, workstations, and all spaces are reconfigured to ensure employees and visitors maintain physical distancing.

• Elevator capacity is limited to allow for 6 feet of distance between riders. If physical distancing is not possible, elevator capacity is limited to 4 individuals.

• Aisles are designated as one-way and stairwells are designated for either “up” or “down” traffic.

• View all physical distancing requirements by visiting the Warehousing, Manufacturing and Logistic Establishments Protocols (must be posted at all entrances).
3. Infection Control

- Workspaces and the entire facility are cleaned at least daily, with common areas and frequently touched areas/objects cleaned and disinfected on an hourly basis during business hours.

- Hard hats and face shields are sanitized at the end of each shift.

- The HVAC system is in good working order and ventilation is increased.

- Hands-free equipment is installed wherever possible (including restrooms).

- Delivery vehicles carry additional sanitation materials and vehicles and equipment are cleaned before and after delivery routes.

- Delivery drivers and employees use clean personal protective equipment for each delivery stop.

- Incoming deliveries are inspected and disinfected prior to storage in the facility.

- View additional infection control protocols by visiting the Warehousing, Manufacturing and Logistic Establishments Protocols (must be posted at all entrances).
4. Protecting Employees

• All employees are told not to come to work if they are sick or if they are exposed to a person who has COVID-19.

• Symptom checks are conducted before employees or visitors may enter the workspace.

• Each employee is assigned their own tools, equipment and defined workspace.

• Ensure hand hygiene practices including allowing employees time to wash their hands, the use of hand sanitizer, and proper glove use.

• All employees who interact with the public or other employees must wear cloth face coverings. Employees who interact with the public and have health conditions that prevent wearing a cloth face covering should wear a face shield with a drape cloth that extends below their chin.

• View additional employee protection protocols by visiting the Warehousing, Manufacturing and Logistic Establishments Protocols (must be posted at all entrances).
4. Protecting Employees (continued)

- Work processes assure face coverings and the use of personal protective equipment does not jeopardize worker safety.

- Breaks are staggered to ensure that six (6) feet between employees can be maintained in breakrooms at all times.

- Shift schedules and breaks are staggered to maximize physical distancing.

- If 3 or more cases are identified within the workplace within 14 days, the employer must immediately report this cluster to the Department of Public Health by phone (888-397-3993 or 213-240-7821).

- View additional employee protection protocols by visiting the Warehousing, Manufacturing and Logistic Establishments Protocols (must be posted at all entrances).
5. Resources to communicate with your staff and customers
