

# TB Clearance Process for Parent and School Volunteers

Answer the [TB Risk Assessment questions](#) with a licensed medical provider of your own or at your school

If “no TB risk identified” – on the TB Risk Assessment questions, your school designee will fill out a [TB Clearance Form](#)

**Finished**

If you answered “yes” on any of the questions on the TB Risk Assessment – go to your medical provider who will order a TB skin or blood test (IGRA)

If you do not have a healthcare provider or insurance, go to the nearest [Public Health Immunization Clinic](#) or a [My Health LA Community clinic](#)

People with a positive TB skin or blood test need a chest x-ray to determine that they are not contagious. The doctor will complete the evaluation, may direct you for treatment, and can complete the TB Clearance form.

If your TB skin or blood test is negative – your doctor can complete the [TB Clearance Form](#)

Take the completed [TB Clearance Form](#) to your school nurse or other designated school official

**Finished**
